PROJECT 08 / WEB DEVELOPMENT

Fieldnotes

A Searchable WordPress Library for Practical Engineering Knowledge

Independent software project | Owner: Ismail Habib | Created September 2026

Actual application capture. Any example records are labeled verification inputs.

The problem

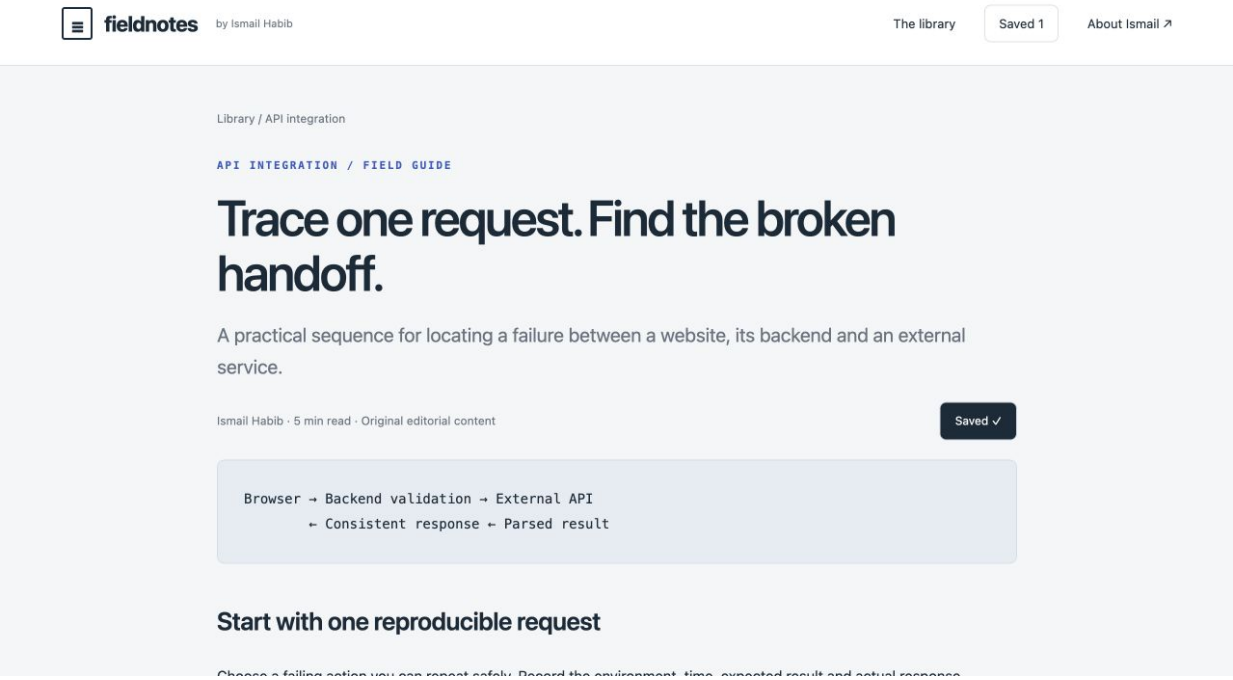

Useful technical guidance becomes difficult to find in an unstructured list. Readers need a focused search experience, clear topic navigation, useful full articles and a simple way to keep resources for later. Editors need content they can maintain without changing the site's code.

What the project delivers

- Eight original editable articles across four technical disciplines
- Full-text search, topic filters and useful empty states
- Article permalinks, workflow summaries and practical checklists
- Browser bookmarks and a saved reading list without accounts

ENGINEERING & EVIDENCE

Built to be inspected.

Actual WordPress article page with original explanatory content, workflow summary and a practical checklist.

What was verified

Executed in real WordPress 7.1.2. All 7 WordPress integration checks passed: theme/content count, body-text search, topic filtering, empty state, full article permalink, custom content API and saved-list view. The separate Python runtime passed 5 integration tests covering eight complete articles, search, combined filters, safe output, saved view and missing routes. Browser bookmark interaction is checked separately during screenshot capture.

How it works

Search or topic to Resource card to Full article to Bookmark to Saved reading list

Current scope

A newly built independent publishing project, not a past client engagement. Verified locally and not publicly deployed. No audience, traffic, SEO or customer outcomes are claimed. Reading times are editorial estimates. Bookmarks stay in one browser and origin and do not synchronize across devices. Content is original explanatory material and must be adapted to the reader's actual systems.

Included: source code, setup guide, tests, screenshots, editable case study and Malt copy.
